

# SIMBARI DESIGN

Architecture, PLLC

## IDE IMAGING PARTNER'S, INC.

Clinton Crossing's PET-CT, Rochester, New York

**PROGRAM:** New PET/CT Scan Room, Control Room and holding area.

**COST:** \$350,000

**DESCRIPTION:** This project consisted of creating a new fixed PET/CT scan room to replace the mobile scanner that IDE was previously using. To do this we had to design a heavily lead shielded room to protect the adjacent occupants and tenants from the high levels of radiation associated with this modality and the radioisotopes used. We created a controlled nuclear medicine area that included modifications to the existing hot lab, quiet holding room and uptake room. In addition, our work included a dedicated uninterruptible power supply (UPS) for the scanner.
