

IDE IMAGING PARTNER'S, INC.

Clinton Crossing's Mega Center, Rochester, New York

PROGRAM: 22,000 SF outpatient medical imaging center.

MODALITIES: MRI (high field and open scanners), CT, Fluoroscopy, Radiographic, Tomography, C-Arm, Gamma Camera, Mammography, Stereotactic, Dexa Scanner, and Ultrasound.

COST: \$1,800,000

The focus of the project was the consolidation of various satellite offices into one large imaging megacentre. Care was given during design to assure patient privacy. To do this the space was divided into separate imaging pods for general diagnostic and MRI, CT and interventional studies, nuclear medicine, and women's imaging. Each pod had its own patient dressing area and tech station. This streamlined patient flow as well as worker productivity. The project also included the design of a 2,500 SF data center on the second floor. This is IDE's central information center. UPS, redundant systems and emergency power were part of the design for the IT hub.
